

# MATTRESS RENTAL SOLUTIONS

**STOCK AVAILABLE IMMEDIATELY!**

## Maximise Acute Bed Space this Winter

The last few years have seen some of the most challenging times for bed capacity planning and management. Current bed space is already at a premium due to the backlog of medical cases which the NHS is faced with, due to treatment delays during the pandemic. As we move into winter and the potential of increased instances of hospitalisation due to infections such as Flu and Noro virus, the demand on bed spaces will be pushed to extremes. Planning now for these eventualities will ensure that hospitals can maintain a high level of service and support for patients and staff through the difficult winter pressure months.

### **Drive DeVilbiss Healthcare are able to help...**

We can provide dynamic mattresses to help you maximise bed space, and help you hit your targets to maintain patient care.

### **The Benefits of our Rental Solutions;**

- Ringfenced stock to ensure we can meet customer needs. Our products are stocked in the UK across multiple sites to ensure we have product available locally for quick installations
- 24/7 Support, with fast response times including in some cases same day delivery\*
- No additional costs; 24/7 service and repair needs covered in rental payments and equipment picked up at end of rental period is also included
- Full training and support requirements provided with each rental as required
- Decontamination certificate provided with each rental to provide assurance that equipment is clean and ready for use

\* From the point of purchase order received, as long as stocks last. Images are for illustration purposes and models available may differ to those shown.

# 2022 WINTER PRESSURES MATTRESS RENTAL

## Artemis Dynamic Replacement System

### Key Features and Benefits;

Three therapy modes available in one system;

- Alternating Therapy Mode
- Constant Low Pressure (CLP) Therapy Mode
- Pulsation Mode

#### Automatic Pressure Control

The control unit automatically adjusts internal pressure to the optimum level based on patient weight. The system will continue to monitor patient weight every 60 minutes or if the system detects a significant change in weight.

#### Low Patient Weight

Featuring a Low Patient Weight mode which reduces internal cell pressures further to provide pressure redistribution and comfort for patients typically under 40kgs\*.

#### Suitable for all environments

The Artemis mattress is very versatile and is used in the acute, long term care and community settings. Within Acute care settings the Artemis mattress system is used to nurse patients in ITU, general medicine wards, paediatrics and palliative care environments.

*\*Clinical judgement should be used along with a full patient risk assessment.*

### Fast, Flexible Solutions

We can offer flexible solutions to meet your equipment needs and preferred financial requirements;

- Rental Solutions to quickly increase temporary bed spaces and be reactive to the seasonal capacity challenges. Rent on a per day, block period or defined contract term. Providing easy management of short and long-term requirements, fast response to specialist clinical needs and seasonal pressures without increasing overall bed stock.
- Rent to buy options stretching the cost of equipment over a fixed period. No large capital expenditure required, with all the benefits of our rental solutions for the duration of the contract and full ownership at the end.
- Capital purchase for long term bed stock
